Here's why ONE BURST is different from normal odor control products:

THE PROBLEM:

Aerosol mists are ineffective over times because they contain large amounts of water and alcohol that fall to the ground quickly and evaporate rapidly. Stationary deodorizers work only in limited areas. If an odor source is outside of their range they can't control it.

THE SOLUTION:

ONE BURST forms a high density spray concentrate that expands rapidly in every direction and circulates completely throughout the room. This active dispersion carries ONE BURST to every corner of the problem area for long lasting odor control.
